PORTFOLIO

https://mdadnan5529.github.io/

SKILLS

Languages

Go (Golang), Java, Python, SQL, Bash, JavaScript

Infra & CI/CD

Kubernetes, Docker, GitHub Actions, Jenkins, GitOps

Frameworks

Spring Boot, Spring MVC, Vert.x, LangGraph, Flyway

Data & Messaging

PostgreSQL, Kafka, Debezium, Redis, VictoriaMetrics

Tools

ELK Stack, Grafana, PagerDuty, REST APIs

EDUCATION

BIT MESRA

B.E., Info. Technology
July 2020 | CGPA: 7.91

St. Xavier's College

Intermediate in Science
2016 | 87.00%

CERTIFICATION

Secure Coding in Java

Udemy, April 2023

PROFESSIONAL SUMMARY

Proactive Lead Engineer(Backend) with 6.5 years of experience. Expert in Go (Golang) and Java, specializing in scalable microservices, and containerized deployments. Proven track record of modernizing legacy monoliths, engineering Agentic AI systems, and driving revenue-impacting architectural improvements. Seeking to leverage expertise in progressive delivery, Kubernetes orchestration, and high-concurrency backend systems in a quality-focused engineering team.

PROFESSIONAL EXPERIENCE

SAMSUNG

Lead Engineer(Backend)

Bengaluru, Karnataka

Feb 2025 - Present

- System Modernization & Architecture:** Spearheaded the migration of the legacy SSP Server monolith (Java Vert.x) into 4 distinct, highly concurrent GoLang microservices. Applied robust system design principles to cleanly transition from Java reactive patterns to Go's native channel-based concurrency model, improving the system's ability to handle requests from 500 to 2500 concurrent requests.
- Microservices Ownership:** Completely owned the end-to-end (E2E) development and deployment of 1 core API while making significant foundational contributions to a second, optimizing system performance and memory footprint.
- Agentic AI Automation:** Engineered an Agentic AI system for "Alert Assist" utilizing LangGraph. Designed a multi-state workflow integrating PagerDuty and VictoriaMetrics to autonomously retrieve metrics, generate summaries, validate data, and make intelligent decisions for true/false alert classification, reducing false positives by 80% and saving 60% of developers' time to resolve alerts.
- Revenue Optimization & DSP Integration:** Led the integration of 3 Demand-Side Platforms (DSPs) and implemented sophisticated ad targeting mechanisms, directly driving a 25% increase in platform revenue.
- Infrastructure & CI/CD:** Provisioned scalable Kubernetes deployments and authored custom GitHub Actions to fully automate testing, building, and deployment workflows, ensuring high availability.
- Engineering Standards:** Led comprehensive code reviews and established internal design and implementation standards, enhancing code quality and team consistency.

TECHMOJO SOLUTIONS

Senior Software Developer

Hyderabad, Telangana

June 2022 - Jan 2025

- Platform Development:** Led backend development for a highly concurrent sports betting platform from scratch to production.
- Revenue Impact:** Integrated Horse Racing E2E into the betting application, establishing a feature set that contributed to 40% of overall platform revenue.
- High-Concurrency Architecture:** Designed and implemented a scalable microservices architecture capable of handling 500+ requests per second, showcasing proficiency in performance optimization.
- Performance Tuning:** Leveraged advanced design patterns for enhanced code extensibility, concurrently achieving a 40% improvement in processing time.
- Event-Driven Data Flow:** Implemented Kafka for real-time, event-driven data processing, effectively reducing process lag and optimizing data flow management.

AMDOCS

Software Developer

Pune, Maharashtra

Sept 2020 - May 2022

- API Development:** Solved complex business problems by developing and enhancing 10+ RESTful APIs using Spring MVC for an Operation Support System.
- Runtime Optimization:** Improved runtime efficiency by 30% through the development and optimization of scalable microservices.
- Full SDLC Ownership:** Engaged in the full Software Development Life Cycle (SDLC), including development, debugging, unit testing, and code reviews, ensuring timely delivery and code excellence.

PROJECTS

Portfolio Website: Developed and deployed a personal portfolio website utilizing HTML, CSS, JavaScript, and Bootstrap to showcase engineering projects, qualifications, and professional achievements.
